

The top half of the page features a complex background. It includes a large, semi-transparent 'F' logo in the center, surrounded by concentric circles and radial lines. The background is a mix of blue and purple tones with a grid-like pattern. A large, bright pink triangle is positioned on the right side, pointing towards the center. The text 'Fusion UDM Premium' and 'vxl software' is located within this pink triangle.

Product overview

Device management for everyone

Fusion UDM Premium

Scalable: bidirectional

Unlike most device-management software, Fusion UDM Premium isn't just for large companies. Ten devices? Fine. Ten thousand? No problem. More? Fusion UDM Premium can handle it with ease.

Discoverability: total

With agentless discovery alongside industry-standard discovery, Fusion UDM Premium can quickly locate any and every device on your network.

Management: simplified

Fusion UDM Premium delivers A-grade monitoring of all networked devices – with incredibly simple remote deployment of commands, patches and updates.

Mobility: always

With support for iOS, Android and Windows Phone, Fusion UDM Premium handles mobile devices with the same grace as it does fixed ones. BYOD support is an imminent, free upgrade.

Administration: automated

If it can be automated, it should be. That way you're freed up to do more important things.

Gathering information for dashboards, running event-based actions, automating tasks – let Fusion UDM Premium get on with those.

Compliance: as standard

Unlike some systems, compliance is a built-in part of Fusion UDM Premium. Keeping your organisation within the law, buying only those licences you need – and keeping audit records – it's all part of Fusion UDM Premium.

Powerful universal device management software

Fusion UDM Premium is VXL Software's powerful, cost-effective universal device manager.

While it's easy to use, it stands shoulder to shoulder with mainstream device managers – and has a few additional features of its own.

Your IT – Unified, simplified, controlled

Your IT estate continues to grow, as does the collection of tools needed to manage each element and node. Your business demands increased operational flexibility, availability and raw processing power, leading to even more hardware acquisitions that need to be managed, maintained and supported.

Fusion Premium from VXL has been developed to provide a centralised management console, replacing the disparate collection of tools your service delivery department currently relies on, and simplifying the job of administering your network and devices.

Fusion Premium – Management Made Simple

Fusion Premium is built on Fusion Professional and is a complete discovery and management toolkit, allowing you to index and administer every device quickly and easily. Granular reporting allows you to monitor and audit every network asset, a select group, or specific machines of interest - as few or as many as your unique business structure requires.

Discovery tools allow you to catalogue and manage every device, fixed or mobile, regardless of location. Fusion Premium gives a comprehensive overview of network assets, detailing software patch, license and general operational health data. Enterprise dashboards further simplify administration offering one-click access to remote control tools, direct from the web browser interface.

Granular Control As Standard

The simple-to-use Fusion Premium interface masks a number of powerful administration tools. The hierarchical group architecture approach of Fusion simplifies the creation and administration of permissions, configurations and more – regardless of the type of client device in use. Thin clients, PCs, laptops, kiosks, tablets and smartphones are all instantly visible and configurable through the single unified interface of Fusion Premium.

Fusion Premium supports a wide range of operating systems, from Windows XP to Windows Embedded together with Linux distributions. Combined with management tools for Apple, Android and Windows Phone* iOS* , Fusion Premium offers a complete management toolkit for every network node.

Built-in software metering allows you to deploy and manage licenses, ensuring full use of existing

resources and allowing you to create more accurate IT budgets.

Additional tools then allow your team to closely monitor software and anti-virus patch levels, and deploy updates to improve network security and resilience.

Increased automation

Helping to reduce the administrative workload of the IT team, Fusion Premium automates many low-level operations, allowing engineers to focus on other duties. Built in scheduling tools allow for automated creation of tasks and profiles on remote devices, simplifying deployment of drive mappings and printer settings for instance. You can even execute PowerShell, VBS and shell scripts remotely to further automate common jobs.

Fusion Premium also assists with unattended management activities, using event based actions to deploy updates, allocate licenses or execute scripts for advanced reconfiguration. Using automated actions, IT compliance becomes easier to attain and maintain, improving overall network health and

Many sites, one interface

Fusion Premium scales seamlessly with the multi-tenancy add-on, allowing IT service providers and system integrators to manage multi-company IT resources affordably and effectively. All assets, regardless of location, are available for management and reporting through the same interface, centralising and simplifying IT management for outsourced and in-house teams alike.

By replacing multiple support tools with a single, common interface, engineers and support providers can concentrate on delivering a world-class service to their end users.

Enterprise scalability – device management that grows as you do

Fusion Premium provides enterprise-class device management for businesses of all sizes. From ten to ten thousand devices, the fully scalable hierarchical framework allows you to offer the same outstanding level of service to all your users.

Complete network visibility

Agentless discovery and cataloguing tools capture details of every network-attached device giving you a granular insight into software, licensing and patch levels. Enterprise dashboards and a multi-device VNC Wall add real-time monitoring and control functionality for improved management and support of individual devices.

Simplifying remote device management

Fusion Premium provides A-Grade monitoring for all devices connected to your LAN or WAN. Execute remote commands that tailor your systems within seconds, or deploy new patches and updates with a click.

Full mobile management

Align your BYOD and mobile operations with business strategy using Fusion Premium to provide support, management and administration for devices running iOS*, Android and Windows Phone*.

Automating administration

From collecting and displaying network information on the enterprise dashboards to building event-based actions, Fusion Premium is designed to simplify and automate tasks, freeing your team to focus on other important tasks.

Compliance as standard

Monitor and deploy application patches and antivirus updates to every networked asset using Fusion Premium, and enjoy the benefits of built-in compliance management and reporting. Your system is not only kept up-to-date, but you have records to prove it.

Maximising software resources

Use Fusion Premium to dynamically allocate software and licensing, ensuring that resources are used intelligently and your business never has a costly shortfall or surplus of either. IT budgeting also becomes much easier to define and comply with.
